KANA KAWANISHI GALLERY

Suzuki was born in 1986, and completed his B.E. at Keio University, Faculty of Science and Technology in 2008, and Master of Arts and Sciences at The University of Tokyo, Emerging Design and Informatics Course in 2010. Solo exhibitions include *Muda na rule* (Needless Rules) (Block House, Tokyo, 2016), and *Hakusen no ue wo arukitakunaru* (It Makes Me Want to Walk on the White Line) (Gallery 9.5, Kyoto, 2015). Group exhibitions include *Rules, Ascriptions* (Kana Kawanishi Photography, Tokyo, 2017).

Suzuki has continuously been focusing on "human unconscious behaviors," and has been researching and creating artworks around this theme from during his undergraduate studies. Addiction behaviours, which in the artist's word is "something that humans do unconsciously and without being told, even though unnecessary for living," connote *something* that exceeds the consciousness and preconscious of humans and continuously attracts the viewers.

In his master's thesis titled "A Research of Extracting Addiction Induction Elements," he verified elements that induct human addiction behaviors from various directions and divers experiments. For example, in one experiment where he measured stress values of examinees under captivity, results proved that stress values were considerably lower when the examinee has set personal rules, such as "I would do xxx if it would xxx." In other experiments, he also found that "unstable conditions (conditions that evoke danger)" and "conditions that prove time irreversibility (conditions that viewers can see time has passed)" would attract the unconsciousness of examinees likewise. Suzuki's artworks, consisted from a variety of series, all condense such elements that trigger human unconscious behaviors.

This exhibition would be the first occasion to show Suzuki's works collectively as a solo exhibition in our gallery. We truly look forward to your visit and experiencing the works that titillatingly attract unconscious of us humans.
